PROJECT DETAILS

Company Projects:
- Title   : Human Resource Management System (HRMS)
- Technologies   : Java, JAX-RS, Hibernate

Description: A web application for managing the training of employees within company environment. It is made with the technologies MySQL Database, JAX RS Restful Services and Angular 6. All the company Employees can hold their profiles and check their leaves and salary status. Also track their project task status and project status that he or she working on.

Academic Projects:
- Title   : Vehicle Insurance using Blockchain Technology (Hyperledger Fabric)
- Technologies   : Hyperledger Fabric, NodeJs, Docker

Description: In this project, we are using the Blockchain framework Hyperledger Fabric in the Vehicle Insurance domain. We are having three organizations Customer, Insurance companies, and shop participating in insurance management. Insurance is mostly handled on paper contracts but we are using smart contracts in Hyperledger fabric to make insurance process more easy and secure.

- Title   : CAPTCHA as a Graphical Password.
- Technologies   : Java, J2EE

Description: In this project, we are using CAPTCHA as a password, to make a password secure from attacks like a brute force attack, bot attack. Captcha is human-readable so attacks like bot attack and brut force attack cannot crack the password. We are giving three dots on pictorial CAPTCHA as a password to authenticate as a login credential.
